

**ANTI-STRATIFICATION-SOLUTION DELIVERY SYSTEM
FOR SPIN-ON DIELECTRICS**

ABSTRACT OF THE DISCLOSURE

An anti-stratification-delivery system comprises a multi-zone-refrigeration unit having at least first and second zone temperature controllers, the first and second zone temperature controllers are capable of being set at different temperatures to establish a temperature gradient in a liquid, the temperature gradient being sufficient to cause natural-thermal convention within the liquid to stir a colloid suspended in the liquid to an approximately uniform-colloidal suspension; and a delivery system configured to dispense the approximately uniform-colloidal suspension.
